April 8, image 6: sound & video converter 4.1.0.0. Organize, edit and share videos in HD quality. View and edit raw and JPEG photos. Edit your photos in their native colors without the need for editing apps. Create and print professional quality photos and documents with ease. Use fast video-streaming technology for direct video calling and video chats. Record videos directly from your webcam or your desktop. All the major browsers support the Silverlight plug-in. Moreover, it does not contain any sort of toolbar or advertising. You can explore the programs below. Word, Excel and PowerPoint worksheets are converted to PDF for free. 1. Field of the Invention The present invention relates to a disk driving apparatus, a file management system, and a file management method. 2. Description of the Related Art A disk drive including a hard disk drive (HDD) as a storage medium is connected to a host apparatus such as a personal computer. The HDD stores data in a form of a recording area. The recording area is formed of a plurality of sectors. A recordable area (referred to as a file allocation table (FAT) area) in which the data is recorded is provided in each sector. The data is recorded in the FAT area in units of sectors. The HDD includes a memory device for storing the data. The memory device stores one FAT area. An index of FAT area is stored in the memory device. The index is information indicating which sector is an FAT area in the HDD (e.g., a sector number). The index indicates, for example, a sequence number of the FAT area in the HDD (or a sequential number of each FAT area). The HDD is controlled by a microcomputer (a controller). The controller controls the HDD based on a recording command from the host apparatus or a recording instruction from a user. An example of the recording command includes a recording start command that designates start of recording of a file, and a recording stop command that designates end of recording of the file. An example of the recording instruction includes a recording start instruction that designates start of recording, a recording stop instruction that designates end of recording, and the like. According to the present conventional technology, if a disk drive such as a magnetic disk drive is used as a storage device, all data, including music data, image data, and program data, is stored in the FAT area. As a result, it is not possible to manage 82157476af
